2. Data acquisition and wrangling

2.1 Data sources

The initial data will be obtained via Wikipedia, the Foursquare API and other internet resources as necessary.

2.2 Data wrangling and analysis

At the first step, the *geographic coordinates (longitude and latitude)* and *names of of Tokyo Districts* will be scraped from Wikipedia or other sources. These data will be used to plot them and build a dataset of Tokyo Districts and *their food and drink venues.* The data on the venues will be acquired using Foursquare API. Following that all food restaraunts will be sorted out, plotted and clusterized to get a general picture of restaraunts distribution. At the final step, Russian food restaraunts will also be singled out and plotted.
